

SAMRAT MALISETTI

Software Engineer — Agentic AI & LLM Systems

California, United States · samratmalisetti@gmail.com · linkedin.com/in/samrat-malisetti · github.com/samratdotm · samratmalisetti.dev

SUMMARY

Software engineer with **5+ years of experience**, currently building production AI agent systems at ADP that serve **41M+ employees across 1.1M clients**. Specialty: making LLM agents safe to trust with real actions — guardrails, HITL flows, evals, memory, and observability.

EXPERIENCE

Software Engineer — ADP

May 2025 – Present

Pasadena, CA · Production AI agents on ADP Assist (41M+ employees, 1.1M clients)

- Core engineer on the **WFM Clocking Assistant** — a conversational agent for clock in/out, breaks, attestations, and department transfers through natural language, with compliance checks built in.
- Architected the agent on the **Strands Agent SDK** (agent loop, tool system, steering hooks), routed through ADP's AI Gateway via Azure OpenAI, with an intent orchestrator deciding where each query goes.
- Designed **human-in-the-loop confirmation flows** with hash validation, expiry, and audit logging, plus steering guardrails enforcing business rules on payroll-critical actions.
- Cut time-to-first-token cost by **75%** with a 2-layer prefix-caching strategy; implemented durable cross-conversation memory with **AgentCore Memory on AWS Bedrock**.
- Built an automated **eval framework** (intent mapping, action parameters, HITL confirmations, multi-turn) gating every release; added per-request **Langfuse** tracing; cut CI/CD deploys from **80 min to 12** on Concourse + Kubernetes.

Full Stack Engineer (Contract) — GorgeousTV

Jun 2024 – Feb 2025

Los Angeles, CA · Remote

- Drove GCP/AWS → Azure migration: VM assessment with Azure Migrate, cost analysis, and VNet/subnet/NSG design.
- Deployed containerized services on **Kubernetes + Docker**; automated monitoring and logging with **Prometheus + Grafana**; managed IAM roles and access policies across all three clouds.

Software Engineer — ZeMoSo Technologies

May 2021 – Aug 2022

Hyderabad, India · Field Squared field-service platform

- Designed an **offline request queue** with sync-on-reconnect; shipped scheduling, data collection, and workflow features in React Native.
- Optimized GraphQL middleware, cutting average latency by **25%**.

Software Engineer — KeeStep

Jan 2019 – Feb 2021

Hyderabad, India

- Built a college management platform end-to-end (React, NestJS, MongoDB): REST APIs, **role-based access control**, PassportJS auth, and real-time WebSocket security with NestJS Guards.

SELECTED PROJECTS

Amparo AI — Multilingual Insurance Voice Agent

YC Hackathon · 2026

Phone-call agent that answers health-plan questions in any language: **24 parallel retrievals at <100ms** per turn → cited 4-plan cost comparison in under 2 seconds, with deterministic cost math and clinical-handoff guardrails.

Specforge — Speak an API Into Existence

Google I/O Hackathon · 2026

A Managed Gemini Agent writes a backend from plain English, **tests it in its own sandboxed VM until green**, and a FastAPI control plane hot-reloads it behind a public URL; the service evolves across conversational turns.

Ingram — Shared Account Brain for Sales Teams

Agentic AI Hackathon SF · 2026

iMessage agent that detects contradictions against a team fact ledger, **supersedes stale facts with full lineage**, and delivers source-attributed account briefs on demand.

SKILLS

AGENTIC AI	Strands Agent SDK, AWS Bedrock · AgentCore Memory, Azure OpenAI, Claude API, Gemini, RAG & hybrid retrieval, eval frameworks, Langfuse, HITL guardrails, prompt caching, MCP, voice agents (LiveKit)
LANGUAGES	TypeScript, JavaScript, Python, Java, SQL
WEB & MOBILE	React, Next.js, React Native, Expo, Node.js, NestJS, Express, FastAPI, GraphQL, PostgreSQL, MongoDB
CLOUD & DEVOPS	AWS, GCP, Azure, Kubernetes, Docker, CI/CD (Concourse), Prometheus, Grafana

EDUCATION

M.S. Computer Science — California State University, Long Beach

2022 – 2024
